

TERRA!

THE GRASS ARMCHAIR

Design by Nucleo_ Andrea Sanna + Piergiorgio Robino

Package Dimension	in 44,88 x 22,04 x 2,76 cm 114 x 56 x 7
Assembled Dimension	in 44,88 x 44,88 x 21,65 cm 114 x 114 x 55
Package Weight	lbs 14,7 Kg 6,7
Assembled Volume	ft ³ 11,86 m ³ 0,336
Surface	ft ² 23,68 m ² 2,20
Liters	about 200 Lt of expanded clay + about 340 Lt of soil

TERRA!

THE GRASS ARMCHAIR

Design by Nucleo + Pierluigi Rospino

First, find an ideal location for growing TERRA!. If the location is slanted, remove soil to obtain a flat area of at least 130 x 130 cm (51.18 x 51.18 in) upon which the corrugated cardboard frames can be built. Separate the cardboard frames by detaching them from the perforations using a cutting knife (fig. 1).

For assembly, follow the numeration sequence and the orientation of the cardboard frames (vertical or horizontal). Start first with the central cardboard frame 4y (fig. 2). Then continue the assembly by first using all the horizontal cardboard frames labelled with the letter X, see diagram below (fig. 3, 4, 5).

At this point assemble all the vertical cardboard frames (fig. 6, 7). Position the assembled frame (fig. 8) at the chosen location.

Fill the armchair with 2/3 of volume (about 200 Lt) of expanded clay, or with any other not compressible materials - rocks, bricks, etc.. (fig. 9). Fill the rest with soil (about 340 Lt, ideal use a sandy type of soil); pack the soil carefully without deforming the frame, making sure there are no empty spaces and the entirety is completely covered. Then cover everything a thin layer of sand.

Start seeding by distributing the seeds uniformly over the surface of the armchair (make sure that the seeds are seeded along the vertical walls — this can be done by moistening the sand), pat down the seeds over the surface by using a shovel or a roller. To complete put a veil of sand on all over the armchair.

Water the armchair for the first time, making sure not to create a gully (use either a watering can or hose with a diffuser). Water on a daily basis, morning and evening, avoiding the hottest time of the day. After 10 days the grass will begin to grow. Trim the grass periodically leaving at least 3 cm (1.18 in) of height.

TERRA! should be ready after two months. Enjoy!
